DISTEMPER

DESCRIPTION
A high opacity, low odour, water based chalky matt hard distemper finish for walls, ceilings and fine plasterwork. The resultant soft, deep matt finish is ideally suited to bedrooms, living rooms, dining areas and other low traffic areas (not recommended for contact areas or where condensation may occur).

APPROVALS & STANDARDS
Water Vapour Permeability (BS EN ISO 7783), mean Sd: <0.030m, mean V: >680 g/m2/day
Water Vapour Permeability Classification (EN 1062-1), Class: V1 (high)
Manufactured under the auspices of ISO 9001:2015 quality & ISO 14001:2015 environmental management systems. 2004/42/EC EU limit value for this product (cat.A/a WB): 30 g/l (2010). This product contains max. 2g/l VOC.
This product has been tested under the regulations outlined in French Indoor Air Quality Decree No 2011-321 – Arrête April 2011 and was awarded an A+.

SURFACE PREPARATION
New plaster walls: For plaster skim, allow at least four weeks for the plaster to thoroughly dry. Apply a primer coat by thinning the paint with a 20 to 50% (v/v) addition of clean water, depending upon the porosity of the substrate. Cut in by brushing at the same dilution recommendation as for priming, to promote flow and sealing of the substrate. Finish by applying two full coats.
For new, fully plastered walls, allow at least six months for the plaster to thoroughly dry before painting.
This product is recommended for painting lime or other natural plasters.
Existing plaster walls: Lightly wash to remove any dust or surface laitance from existing hard distemper finish. Soft distemper must be completely removed before painting. Apply a primer coat by thinning with a 5 to 25% (v/v) addition of clean water, depending upon the porosity of the substrate. Finish by applying at least one full coat, as required. This product is recommended for painting previously painted lime or other natural plasters.
This product is not recommended for painting over non porous oil or vinyl based systems.

APPLICATION
Stir thoroughly before use. Product may be applied to slightly damp surfaces which can then subsequently dry out.

Brushing: Use a high quality synthetic bristle brush that is suitably sized for the project at hand. New brushes should be conditioned by washing in clean water and thoroughly drying with a clean, lint free, cloth. Avoid immersing brush too far into the paint to prevent paint from entering the ferrule. Avoid drips and splashes by not overloading the brush. Apply paint in even strokes and only extend painting area such that a wet edge can be easily maintained. For the highest quality appearance, keep final brush strokes all in the same direction and never go over paint that has already begun to dry.

Roller: Use a short nap wool blend type sleeve for best appearance on smooth surfaces. Increase nap length for textured surfaces, as appropriate, to ensure even and thorough coverage. Keep final strokes all in the same direction, maintaining a wet edge throughout. Never be tempted to go over already drying paint as this will lead to lap marking and flashing.
DISTEMPER

Spray Finishing:

**Conventional**
- Thin with up to: 50%(v/v) water
- Tip size: 1.60 to 2.00 mm (62 to 78 thou)
- Air pressure: 0.28 to 0.41 MPa (40 to 60 psi)

**Airless**
- Thin with up to: 30%(v/v) water
- Tip size: 0.28 to 0.54 mm (11 to 21 thou)
- Pressure at tip: 12.6 to 19.6 MPa (1800 to 2800 psi)

CLEANING

Remove excess paint and clean all equipment using clean water immediately after use. Never store brushes or roller sleeves in water as this will result in deterioration of their application performance.

**STORAGE & SHELF LIFE**

Store unused paint in a cool, dry, frost free area away from direct sunlight. Ensure tin lids are securely and correctly replaced after use. For best results, distemper should be used within 14 days of delivery. Whilst the product shelf life is much longer, significant differences in depth of colour and lustre may result if the product is stored for significant periods of time.

**AFTERCARE**

**Cleaning:** For light surface soiling, use a dilute, lukewarm solution of domestic washing up liquid and a clean sponge or lint free cloth. Ensure sponge or cloth is well wetted (but not dripping) then very gently wipe the affected area.

To help prevent general build up, keep your home well ventilated during activities likely to contribute to oil and grease accumulation, like cooking. Tackle dust generated from DIY by, preferably, collecting at source or thorough vacuum cleaning.

To prevent marking, always use a soft brush attachment to vacuum clean adjacent surfaces.

**Repair:** Prime any exposed substrate and repaint item “break to break” with one or two coats as required. Spot repairs will almost always result in inferior aesthetic appearance.

**DISPOSAL & RECYCLING**

Dispose of excess or waste paint via a licensed waste handing operator. Empty metal containers may be recycled (remove plastic handle on 5L tins).

**HEALTH & SAFETY**

Always read the label on the can before use. Ensure maximum ventilation during application and drying. Consult product material safety data sheet for further details.
